ABSTRACT

This document contains data used in a study which sought to determine how much audience is diverted from local television stations by cable systems carrying distant signals. A companion report to "Audience Diversion Due to Cable Televison: A Statistical Analysis of New Data," this paper contains the data that are analyzed in the other volume. Markets are ranked by number of television households, and data are included from 211 counties in the United States. (JEG)

PREFACE

The Federal Communications Commission's current *Inquiry into the Economic Relationship between Television Broadcasting and Cable Television* seeks information to guide the Commission's continuing re-evaluation of its cable television regulations. One of the central questions in the *Inquiry* is: How much audience is diverted from local TV stations by cable systems carrying distant signals? A companion volume, *Audience Diversion Due to Cable Television: A Statistical Analysis of New Data*, R-2403-FCC, provides some answers, based on a statistical analysis of new audience data assembled by the FCC's Cable Bureau. This volume reproduces the data used in their entirety.

The following tables contain all of the data used in my study of audience diversion due to cable television,[1] and then some. Unless otherwise stated, the data are from the ARB (American Research Bureau) Arbitron Television 1977 County Coverage, CATV--Controlled Counties. The items included in the tables are as follows:

COUNTY

County number is arbitrarily assigned. County name and state are also shown.

MARKET

The number shown for the market is its rank according to ARB area of dominant influence (ADI)[2] television households (TVH). The ranking is for 1977-1978.[3] A list that translates market ranks to market names precedes the data tables. A 1 or 2 following the decimal point is arbitrarily assigned to distinguish between markets that tied in the ARB rankings.

TIME ZONE

The code for the time zone in which the county is located is:

1 Eastern
2 Central
3 Mountain
4 Pacific

---

[1]Rolla Edward Park, *Audience Division Due to Cable Television: A Statistical Analysis of New Data*, The Rand Corporation, R-2403-FCC, January 1979.

[2]A market's ADI includes (with a few exceptions) all those counties within which a market's stations attract more viewers than any other market.

[3]Television Markets and Rankings Guide, 1977-78, Arbitron Television, New York.

INCOME

Median family income in 1969 for the county is from *County and City Data Book, 1972, A Statistical Abstract Supplement*, U.S. Department of Commerce.

COTVH

COTVH is the number of television households (in hundreds) in the county as estimated by ARB for 1977-1978.[1] Numbers are shown separately for non-cable households (0 for off the air) and for cable households (C). Cable penetration in the county (COPEN) as reported in Table 2, Section II, is calculated from COTVH as C/(0+C).

SYSTVH

The number of households (in hundreds) passed by the cable television system's installed trunk and feeder cable are from FCC records. The numbers come from reports that cable systems are required to make to the FCC annually on Form 325. C indicates the number of subscribing households; 0 is the number of households passed by the cable that do not subscribe. The latter number is calculated by subtracting reported subscribers from reported homes passed. In some cases, due to definitional or reporting problems, the result is a negative number. If so, nonsubscribing households passed is set equal to zero. System penetration (SYSPEN) is calculated using SYSTVH as C/(0+C).

The penetration variable (PEN*) used in the total audience regressions in Section II is calculated as follows: For cable observations, PEN* = SYSPEN. For off-the-air observations, it is SYSPEN weighted by nonsubscribing households passed by cable as a proportion of total non-cable households in the county:

$$PEN^* = SYSPEN\ (SYSTVH-0/COTVH-0)\ .$$

[1] As of January 1, 1978.

INTAB

INTAB households (the units here are single households, not hundreds) are those included in ARB's survey sample, reported separately for off-the-air and cable households.

LCLSHR

Local share is the share of full-day (or total) audience captured by local stations, shown separately for off-the-air and cable viewers. Counties with an off-the-air local share less than 70 are excluded from the analysis in this report.

HUT

Homes using television is (roughly) the fraction of television households that are watching television at any given time. It is reported separately for five different time periods or "day parts," some of which are defined differently in different time zones, as follows:

	Eastern and Pacific	Central and Mountain
TOTAL (or FULL DAY)	6:00 am-2:00 am Monday-Sunday	6:00 am-2:00 am Monday-Sunday
DAYTIME	6:00 am-4:30 pm Monday-Friday	6:00 am-3:30 pm Monday-Friday
EARLY FRINGE	4:30 pm-7:30 pm Monday-Friday	3:30 pm-6:30 pm Monday-Friday
PRIME TIME	7:30 pm-11:00 pm Monday-Sunday	6:30 pm-10:00 pm Monday-Sunday
LATE FRINGE	11:00 pm-2:00 am Monday-Friday	10:00 pm-2:00 am Monday-Friday

The fraction of homes using television is calculated from ARB reports of total hours watched as in the following example. ARB estimates that non-cable households in our County 1 watched a total of 718,800 hours per week during the TOTAL or FULL-DAY period. There are 18,100 such households; if they all had watched TV all the time, they would have watched a total of 2,534,000 hours (18,000 households times 20 possible hours per day times 7 days per week). Thus on average over the FULL-DAY period, .284 is the fraction watching TV at any given time.

STATION

Call sign and channel assignment (from the Television Markets and Rankings Guide, 1977-78) are shown for each station reported to be watched in the county. In a few cases, data for parent and satellite stations are combined. Then the first letter of the call sign is replaced by an asterisk. In such cases SHAREs are combined by adding parent and satellite SHAREs, and NWCs (net weekly circulation) are combined by taking the maximum of parent and satellite NWC.

AFFIL

Affiliation codes are as follows:

1 ABC
2 CBS
3 NBC
4 Independent commercial
5 Noncommercial

The first number in the three-digit sequence is primary affiliation; the second, if nonzero, is secondary affiliation; and the third is tertiary affiliation which comes from the Television Markets and Rankings Guide, 1977-78.

MKT

MKT is the rank of the market to which the station is assigned, according to the list that precedes the data tables. If the station's market is the same as the county's market, the station is counted as a local station; otherwise it is classified as a distant station.

SHARE

Station share is the number of households watching a particular station, expressed as a percentage of households watching any station. SHARE is reported separately for each of five time periods, and separately for off-the-air and cable viewers. Shares may not add to 100 because of rounding or because some stations that are watched are not included in the ARB report (notably foreign stations and stations that individually receive very low viewing in the ARB sample). Four

counties (111, 120, 138, and 150) are excluded from the analysis because reported stations' shares total less than 90 percent during either the TOTAL (FULL-DAY) or PRIME-TIME periods.

NWC

Net weekly circulation is the percentage of households (off the air and cable separately) that watch the station at least once a week.
